

**Preliminary Consolidated Financial Results for the
 Nine Months Ended December 31, 2017, and
 Revision of Consolidated Financial Results and Dividends Forecast for the
 Fiscal Year Ending March 31, 2018
 (Prepared in Accordance with Japanese GAAP)**

1. Preliminary Consolidated Financial Results for the Nine Months Ended December 31, 2017

Tokyo, February 2, 2018—Today, Sony Corporation, the parent company of Sony Financial Holdings Inc. (“SFH”), is expected to announce its consolidated financial results for the third quarter ended December 31, 2017 (October 1 to December 31, 2017), prepared in accordance with generally accepted accounting principles and practices in the United States (“U.S. GAAP”). Sony Corporation’s U.S. GAAP results are expected to include financial results for the Sony Group’s Financial Services segment, which comprises the Sony Financial Group.

Although our preparation of financial results for the Sony Financial Group, in accordance with generally accepted accounting principles and practices in Japan (“Japanese GAAP”), is not yet complete, preliminary consolidated financial results for the nine months ended December 31, 2017 (April 1 to December 31, 2017), are provided below as part of our efforts to disclose information to our shareholders and investors in a timely and appropriate manner.

We plan to announce our final consolidated financial results for the nine months ended December 31, 2017, on February 14, 2018.

(1) Preliminary Consolidated Financial Results for the Nine Months Ended December 31, 2017 (April 1 to December 31, 2017)

(Billions of yen)

	For the Nine Months Ended December 31, 2016 (Actual)	For the Nine Months Ended December 31, 2017 (Preliminary)
Ordinary revenues	1,041.3	1,175.8
Ordinary profit	50.3	49.5
Profit attributable to owners of the parent	33.7	42.4
Net income per share (Yen)	77.51	97.67

(Reference) Net assets attributable to shareholders, which equals total net assets minus subscription rights to shares and non-controlling interests, and total assets as of December 31, 2017 were ¥620.1 billion and ¥12,271.6 billion, respectively.

Note: Fractional amounts of less than ¥0.1 billion are discarded for ordinary revenues, ordinary profit and profit attributable to owners of the parent.

(2) Principal Reasons for Changes in Preliminary Consolidated Financial Results

During the nine months ended December 31, 2017 (April 1 to December 31, 2017), consolidated ordinary revenues increased 12.9% compared with the same period of the previous fiscal year, to ¥1,175.8 billion, owing to increases in ordinary revenues from all the businesses: life insurance, non-life insurance and banking businesses. Consolidated ordinary profit decreased 1.6% year on year, to ¥49.5 billion. By business segment, ordinary profit from the life insurance business decreased, ordinary profit from the non-life insurance business was flat and ordinary profit from the banking business rose. Profit attributable to owners of the parent, however, was up 26.0% year on year, to ¥42.4 billion. This increase was due to a gain on disposal of fixed assets from a sale of the real estate held for investment of ¥13.2 billion in the life insurance business, which was recorded in extraordinary gains in this third quarter ended December 31, 2017.

Operating performance by business segment

Life Insurance Business

Ordinary revenues grew year-on-year due to steady investment performance in the separate account and higher income from insurance premiums, owing to a steady rise in the policy amount in force. Ordinary profit decreased year on year due to a higher provision of policy reserve relating to the acquisition of new policies reflecting a revision in the standard yields used for calculating policy reserves, lower gains on sale of securities in the general account and a deterioration in net gains/losses on derivative transactions to hedge market risks for available-for-sale securities. On the other hand, gains/losses related to market fluctuations for variable life insurance* improved year on year, which partially offset the negative impact of the above-mentioned decreases in ordinary profit.

*The total of (a) the provision of policy reserves for minimum guarantees for variable life insurance according to market fluctuations and (b) net gains/losses on derivative transactions to hedge market risks for the products

Non-life Insurance Business

Ordinary revenues expanded year on year, owing to an increase in net premiums written for mainstay automobile insurance. Due to a lower car accident ratio, offset by a rise in advertising and other operating expenses, ordinary profit was flat year on year despite a decline in the loss ratio.

Banking Business

Ordinary revenues rose year on year due to increases in interest income on loans in line with a favorably growing balance of mortgage loans and on investment securities. Ordinary profit grew year on year, due to a decrease in operating expenses, especially in advertising expenses for the card loan business.

Today, SFH also announced [Reference Disclosure] Key Performance Figures Based on U.S. GAAP.

2. Revision of Consolidated Financial Results and Dividends Forecast for the Fiscal Year Ending March 31, 2018

SFH revised its consolidated financial forecast for the year ending March 31, 2018 (April 1, 2017, to March 31, 2018), as indicated below. The previous forecast was announced on April 28, 2017.

(1) Revision of Consolidated Financial Results and Dividends Forecast for the Fiscal Year Ending March 31, 2018

	Formerly announced forecast (A)	Updated forecast (B)	Amount of change (B-A)	Percentage change (%)	(Billions of yen, %) (Reference) Results for the year ended March 31, 2017
Ordinary revenues	1,430.0	1,540.0	110.0	7.7	1,381.6
Ordinary profit	67.0	64.0	(3.0)	(4.5)	66.3
Profit attributable to owners of the parent	42.0	50.0	8.0	19.0	41.6
Net income per share (Yen)	96.56	114.95			95.69
Dividend per share (Yen)	55	60	5		55

Note: Fractional amounts of less than ¥ 0.1 billion are discarded for ordinary revenues, ordinary profit and profit attributable to owners of the parent.

(2) Principal Reasons for Changes in Consolidated Financial Results Forecast

Operating results in the life insurance business for the nine months ended December 31, 2017 differed from the expectations at the beginning of the fiscal year. Therefore, SFH has revised its consolidated financial results forecast as follows:

Ordinary revenues have been revised upward due to better-than-expected results during the nine months in the life insurance business.

Ordinary profit has been revised downward due to lower-than-expected results during the nine months in the life insurance business. Reasons include a deterioration in net gains/losses on derivative transactions to hedge market risks for available-for-sale securities and lower gains on the sale of securities in the general account, which was partially offset by a

decrease of costs relating to the acquisition of new policies in line with lower-than-expected acquisitions compared with the forecast at the beginning of the fiscal year. In consideration of the gain on disposal of fixed assets in the life insurance business in this third quarter ended December 31, 2017, gains on sale of securities in the general account are expected to be lower than the initial forecast for the full year.

While ordinary profit has been revised downward, forecasts for profit attributable to owners of the parent have been revised upward. This was because of a gain on disposal of fixed assets in the life insurance business, which was recorded in extraordinary gains in the third quarter ended December 31, 2017.

(3) Principal Reasons for Changes in Dividends Forecast

SFH aims for steady increases in dividends in line with earnings growth over the medium to long term, while securing sufficient internal reserves to ensure the financial soundness of Group companies and to invest in growth fields. Management will examine earnings growth over the medium to long term not only by taking into account statutory profit; we will also place more importance on profit indicators on the basis of economic value, such as MCEV, that more closely track growth in the life insurance business. Furthermore, management will determine specific dividend amounts by taking into account a comprehensive range of factors surrounding the Sony Financial Group. Considering the business environment, growth of our group and the level of economic value-based profit growth, in light of the above medium-term dividend policy, SFH decided to revise the year-end dividend forecast from ¥55 per share to ¥60 for the year ending March 31, 2018. The previous forecast was announced on April 28, 2017.

These preliminary results are based on information available to SFH's management as of this date, and may differ substantially from actual results expected to be announced on February 14, 2018 for a variety of reasons.

SFH's consolidated results* are prepared in accordance with Japanese GAAP. As such, these figures differ in significant respects from the financial information reported by Sony Corporation, SFH's parent company, which prepares its financial statements in accordance with U.S. GAAP.

* SFH's scope of consolidation includes following companies:

Sony Financial Holdings Inc., Sony Life Insurance Co. Ltd., Sony Assurance Inc., Sony Bank Inc., Sony Payment Services Inc., SmartLink Network Hong Kong Limited., Sony Lifecare Inc., Lifecare Design Inc., and Proud Life Inc.**

Affiliated companies accounted for under the equity method:

AEGON Sony Life Insurance Co., Ltd., and SA Reinsurance Ltd.

** Proud Life Inc. is included in the scope of consolidation from the second quarter ended September 30, 2017.

On February 2, 2018, Sony Corporation is scheduled to announce its consolidated financial results for the third quarter ended December 31, 2018 (October 1 to December 31, 2017).

Statements made in this press release concerning the current plans, expectations, strategies and beliefs of the Sony Financial Group. Appendix:

Significant Differences between Japanese GAAP and U.S. GAAP

SFH's consolidated results are prepared in accordance with accounting principles generally accepted in Japan ("Japanese GAAP") and provisions of the Insurance Business Act of Japan. As such, these figures differ in significant respects from the financial information reported by Sony Corporation, SFH's parent company, which prepares its financial statements in accordance with accounting principles generally accepted in the United States of America ("U.S. GAAP"). Significant differences between Japanese GAAP and U.S. GAAP are described below:

(1) Standards for recognizing income from insurance premiums in the life insurance business

Under U.S. GAAP, premium income on traditional insurance products is recognized as revenues during the premium-paying period. Income other than premium payments received under investment agreements or for separate agreements under universal life insurance (*), which are equivalent to deposits, is recognized as revenue. Under Japanese GAAP, all premiums paid by policyholders are recognized as revenues.

*Note: For Sony Life Insurance Co., Ltd., investment agreements primarily include single premium endowment insurance, single premium educational endowment insurance and individual annuities. Universal insurance mainly includes variable life insurance and interest-rate sensitive whole life insurance.

(2) Standards for recognizing net gains from investment in the life insurance business

The recognition of net gains from investment in the life insurance business, which are classified in separate accounts defined under the Insurance Business Act of Japan and which directly belong to policyholders, differs between Japanese GAAP and U.S. GAAP. Under U.S. GAAP, net gains or losses are always recorded as revenues, whereas under Japanese GAAP such figures are recognized as ordinary revenues if they are positive, and as ordinary expenses if negative.

(3) Policy reserves (future insurance policy benefit, etc.) in the insurance business

Since the method of calculation differs between Japanese regulations and U.S. GAAP, profits and losses during the period differ as well. Under the Insurance Business Act of Japan, insurance companies in Japan are required to accumulate a policy reserve for the fulfillment of future obligations such as payment of insurance benefits based on the accumulation method and actuarial assumptions approved by the authorities of the supervisory administrative agencies in Japan, whereas under U.S. GAAP, liabilities for future insurance policy benefits are composed of the present value of estimated future payments to policyholders. Under U.S. GAAP, liabilities for future insurance policy benefits are computed based upon actuarial assumptions, such as future investment yield, mortality rates, morbidity rates, contingency rates and other factors, which are revised at least once a year. Future insurance policy benefits are remeasured and large impacts may be reflected to profit in variable insurance policies from revising investment yield due to fluctuations in the stock market or the bond market. Liabilities for future insurance policy benefits also include liabilities for minimum guaranteed benefits related to certain insurance products such as variable insurance policies. With respect to liabilities for minimum guaranteed benefits, the relevant insurance policies differ between Japanese GAAP and U.S. GAAP.

(4) Deferral and amortization of deferred insurance acquisition costs

Under Japanese GAAP, insurance acquisition costs in the life insurance and non-life insurance businesses are charged as costs when incurred, whereas under U.S. GAAP insurance acquisition costs are deferred and amortized, in general, equally over the premium-paying period of the related insurance policies or the policy term by using the same calculation basis used in computing future insurance policy benefit. The deferred insurance acquisition costs for interest rate-sensitive whole life insurance and variable insurance are amortized over the policy term in proportion to the estimated gross profits, which are revised at least once a year as well as the actuarial assumptions to evaluate liabilities for future insurance policy benefits. From revising the estimated gross profits large impacts may be reflected to profit. Under U.S. GAAP, insurance acquisition costs include such items as commissions and medical examination and inspection report fees that directly relate to the costs of acquiring new insurance policies and renewing policies, as long as they are recoverable.

(5) Contingency reserve

Pursuant to provisions of the Insurance Business Act of Japan, to ensure the fulfillment of future obligations, insurance companies in Japan are required to accumulate a contingency reserve to account for the risk of insurance payment events occurring at a higher-than-expected rate due to higher-than-expected mortality and morbidity rates (insurance risks), the risk of actual investment yields being lower than the assumed investment yields relating to outstanding policies (assumed interest rate risk), the risk of actual investment results being lower than the amount guaranteed relating to the minimum guaranteed portion of variable life insurance or variable annuities (minimum guarantee risks) and other risks. The Insurance Business Act of Japan establishes an accumulation standard and a maximum amount of reserve for each risk. The contingency reserve can be reversed in regards to each risk. Contingency reserve is recorded as a component of policy reserve on the balance sheet. Under U.S. GAAP, there is no requirement for the provision of such a legal reserve.

(6) Catastrophe reserve

Pursuant to the provisions of the Insurance Business Act of Japan, non-life insurance companies in Japan are required to accumulate an amount based on premium income to cover losses due to catastrophic events. The catastrophe reserve acts as a provision against risks to which the law of large numbers is not applicable on a single-year basis, in consideration of the special characteristics of the non-life insurance business to cover a wide range of risks including disasters. The catastrophe reserve is reversed in fiscal years in which a catastrophe occurs. Furthermore, the catastrophe reserve is accounted for as a part of underwriting reserves on the balance sheet. There is no requirement for the accumulation of such a legal reserve under U.S. GAAP.

(7) Reserve for price fluctuations

Pursuant to provisions of the Insurance Business Act of Japan, insurance companies in Japan are required to accumulate a reserve to cover losses due to price fluctuations in assets subject to market price volatility, particularly investments in stocks, bonds and foreign currency-denominated investments. The Insurance Business Act of Japan establishes the accumulation standard and a maximum amount of reserve for each asset. The reserve for price fluctuations may be reversed to reduce losses arising from price fluctuations of those assets. Under U.S. GAAP, there is no requirement for the provision of such a legal reserve.

(8) Foreign currency transactions

The majority of the Sony Financial Group's operations in the banking business involve transactions denominated in foreign currencies. Under Japanese GAAP, transactions involving assets and liabilities denominated in foreign currencies are in principal translated to yen at the exchange rate prevailing on the date of the settlement of accounts, and any gains and losses on translation are recorded in the statements of income as foreign exchange gains or losses. For that reason, in the banking business, gains and losses on translation of those investments coming from foreign currency deposits (liabilities) are offset partially in the statements of income by ones from investments in available-for-sale bonds denominated in foreign currency (assets) for the purpose of covering those foreign currency deposits. However, under U.S. GAAP, although gains and losses on translation on foreign currency deposits (liabilities) are recorded in the statements of income, gains and losses on translation of available-for-sale bonds denominated in foreign currency (assets) are posted directly to net assets in accordance with fluctuations in the fair market value of securities held, and are therefore not recorded in the statements of income until maturity or sale. As such, under U.S. GAAP, asset-side gains and losses on translation and liability-side gains and losses on translation are recorded differently. Therefore, foreign exchange gains or losses resulting from liability-side exchange rate fluctuations have a larger impact on profit under U.S. GAAP than is the case under Japanese GAAP.

Under U.S. GAAP, the fair value option has been elected for certain investments in available-for-sale bonds denominated in foreign currency (assets) in the banking business. The election was made to mitigate accounting mismatches related to fluctuations of foreign exchange rates. Under U.S. GAAP, unrealized gains and losses on items for which the fair value option have been elected shall be reported in current earnings, and the gains and losses on translation of these bonds to be recorded in the statements of income.

(9) Compound financial instruments (financial instruments including derivatives)

When accounting for compound financial instruments under U.S. GAAP, if such financial instruments are valued together, they are marked to market together regardless of the category in which they are held, and valuation gains or losses are recorded in the statements of income. However, under Japanese GAAP the method for valuing these instruments differs depending on the category in which they are held. Consequently, the amounts of valuation gains or losses, gains or losses on sale, and impairment losses differ depending on whether U.S. GAAP or Japanese GAAP is applied.

(10) Policy reserve matching bonds

Life insurance businesses maintain policy reserves to ensure their ability to meet their long-term insurance obligations, and use bonds to manage the interest rate risk associated with the characteristics of those obligations. With the aim of reflecting the reality of managing this interest rate risk, under Japanese GAAP the "Temporary Treatment of Accounting and Auditing concerning Policy-Reserve-Matching Bonds in the Insurance Industry" (The Japanese Institute of Certified Public Accounts Industry Audit Committee Report No. 21) categorizes bonds used for this purpose as "policy reserve matching bonds," authorizes their valuation and accounting treatment using the amortized cost method. Sony Life Insurance Co., Ltd. valued bonds categorized as "policy reserve matching bonds" using the amortized cost method in accordance with Japanese GAAP. However, as the accounting treatment recognized under Japanese GAAP is not applied under U.S. GAAP, such bonds are classified as securities available for sale, measured at fair value as of the date of the financial statements, and recorded the unrealized holding gains and losses (net of tax) in accumulated other comprehensive income. Gains or losses on sale of bonds are realized as profit or loss in the statements of income.

(11) Goodwill

Under Japanese GAAP, if acquisition cost excess net value of acquired assets and liabilities when an entity obtains the control of other entities or businesses, "goodwill" in the amount equal to the excess is recorded as an asset. Goodwill excludes the portion of the non-controlling interest and shall be amortized regularly over the effective period up to 20 years. An impairment testing for goodwill is conducted regularly and impairment losses are recorded if necessary.

Under U.S. GAAP, goodwill includes the portion of the non-controlling interest and shall not be amortized. If the carrying amount of goodwill exceeds the implied fair value of goodwill, an impairment loss in the amount equal to the excess is recorded. Consequently the amounts of the balance of goodwill and the expenses or impairment losses on goodwill differ depending on whether U.S. GAAP or Japanese GAAP is applied.
